PROFILE SUMMARY

Analytical Computer Science student skilled in Python, Data Analysis, and Machine Learning. Built end-to-end ML models and experimented with deep learning architectures. Focused on Generative AI and NLP with project-based experience delivering functional prototypes.

EDUCATION

Bachelor of Science in Computer Science (BSCS) — 5th Semester (Ongoing)
Govt College University Faisalabad (GCUF)
Current CGPA: 3.80 / 4.00

TECHNICAL SKILLS

Programming & Libraries: Python (Advanced), NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, TensorFlow, Keras
Machine Learning: Regression, Classification, Decision Trees, Deep Neural Networks
Data Analysis & Visualization: Data preprocessing, EDA, Feature engineering, Dashboards
Generative AI & NLP: Transformers, Tokenization, Text generation, Encoder-Decoder models
Tools & Platforms: Jupyter Notebook, Google Colab, VS Code, GitHub
Other: API Integration, Dataset Handling, Model Evaluation

PROJECTS

House Price Prediction (ML)

- Built an end-to-end ML pipeline (EDA → feature engineering → modeling) using Python & Scikit-learn.
- Trained and tuned multiple models, improving accuracy by **30%+** through feature optimization.

Image Classification with CNN (Deep Learning)

- Developed a CNN using TensorFlow/Keras with augmentation and regularization.
- Achieved **high-accuracy** classification and visualized model performance (curves + confusion matrix).

Text Classification using Transformers (NLP)

- Fine-tuned BERT/DistilBERT for text classification using HuggingFace.
- Improved F1-score significantly compared to baseline ML models.

CURRENT LEARNING FOCUS

Generative AI (Transformers, LLMs, Diffusion Models)

Passionate CS student with hands-on experience in ML, NLP, and Generative AI, building end-to-end projects and practical prototypes.
